What you should NOT do

Make sure you are NOT messing around. They can tag your pull request as **invalid** and then it **won't count**. That includes:

- **automated** e.g. scripted opening PRs to remove whitespace / optimize images.

- **disruptive** e.g. taking someone else's branch/commits and making a PR.

- **hindrance**, i.e. not helping.

- **Something that's clearly an attempt to simply +1 your PR count for October.**
